falsely claim electrically charged rocks found in congo* list of
rock types wikipedia can these rocks really power light bulbs no
say the experts

what are rocks rocks are mineral aggregates with a combination
of properties of all the mineral traces any unique combination of
chemical composition mineralogy grain size texture or other
distinguishing characteristics can describe rock types
additionally different classification systems exist for each major
type of rock jan 26 2023 videos said to show that rocks found
in africa can produce electricity have been viewed millions of
times online some social media users are claiming they could be
the answer to the continent s energy problems that s a big claim
so we ve shown the footage to experts who ve explained to us

why such properties are highly unlikely rock in geology naturally occurring and coherent aggregate of one or more minerals such aggregates constitute the basic unit of which the solid earth is composed and typically form recognizable and mappable volumes rocks are commonly divided into three major classes according to the processes that resulted in their formation rocks igneous metamorphic and sedimentary rocks hold the history of the earth and the materials that will be used to build its future igneous igneous rocks photos descriptions and facts about intrusive and extrusive igneous rocks andesite basalt dacite diabase diorite gabbro granite obsidian pegmatite peridotite pumice rhyolite scoria tuff jan 25 2023 claim electrically charged stones have been discovered in the democratic republic of the congo ap s assessment false while some minerals can serve as conduits for electricity rocks can t store electricity experts told the associated press a video circulating in connection with the claim shows a rock that is likely pyrite a common to geologists a rock is a natural substance composed of solid crystals of different minerals that have been fused together into a solid lump the minerals may or may not have been formed at the representative densities for common rock forming minerals i e ? g and rocks i e ? b are listed in the click here to see full size table table the bulk densities for sedimentary rocks which typically have variable porosity are given as ranges of both dry ? b and water saturated ? b the pore filling fluid is usually briny water often indicative of the presence of seawater when the rock was being deposited or lithified rocks are divided into three basic types depending on how they were formed igneous sedimentary and metamorphic how rocks are classified natural objects such as rocks and minerals contribute to the beauty and wonderment of the national parks and should be left as they were found so that others can experience a sense of

discovery any unique combination of chemical composition mineralogy grain size texture or other distinguishing characteristics can describe a rock type additionally different classification systems exist for each major type of rock 1 there are three major types of rock igneous rock metamorphic rock and sedimentary rock contents 1 igneous rocks geology portal v t e in geology rock or stone is any naturally occurring solid mass or aggregate of minerals or mineraloid matter it is categorized by the minerals included its chemical composition and the way in which it is formed rocks form the earth s outer solid layer the crust and most of its interior except for the liquid outer core and pockets of
