Poverty, famines, wars, and ethnic conflicts lead to large movements of refugees. The papers in this book provide an analysis of the economics of immigration. Junankar discusses why people migrate, the likely destinations for migrants, and their employment in the destination

countries. He studies the benefits to the migrant families in terms of higher wages and living standards, and also studies how immigrants fare in the Australian labour markets in terms of finding good jobs, and whether there is discrimination against them. Economics of Immigration analyses the macroeconomic impacts of immigration on the Australian economy and discusses why some groups favour immigration while other groups are against it. Junankar argues immigration has been beneficial for employment and growth; not only adding to labour supply but also to labour demand,

hence leading to favourable outcomes. This collection of essays shows how immigration has helped the economic development of Australia, while also highlighting that the historical reasons for immigration lie in the colonisation of many countries in Asia and Africa. First, some stylized facts on the performance of these economies relative to their non-resource peers are provided. Second, the experience of Fund engagement in these economies with respect to surveillance, programs, and technical assistance is assessed. Third,

the experience of selected countries with good practices in the management of the natural resource wealth is presented. Fourth, the experience of IMF advice in helping RRDCs set up resource funds is discussed. Finally, the main themes and messages from the IMF staff consultation with external stakeholders (CSOs, policy makers, academics) are presented. The 2013 IB HL Economics syllabus change introduced Paper 3, an essentially calculations-based assessment. This development challenged teachers and students alike, as few Paper 3 practice resources

have been available. This is furthermore an area of the syllabus where, as in Mathematics, practice is fundamentally important in developing the skills and confidence for needed for success. Paul Hoang's latest publication therefore represents an invaluable resource in helping students to prepare for the examination challenges they face. For many candidates the mix of words, theory and numbers in Paper 3 questions can be overwhelming, if they have not developed easy familiarity throughout their course. With clear

layout and content that beautifully mirrors IB examination questions, this resource is the one we have all been waiting for. I absolutely recommend it as a 'must have' for all those who are preparing for the HL Economics examination. IT is a core resource invaluable to students and teachers alike. Advances in artificial intelligence (AI) highlight the potential of this technology to affect productivity, growth, inequality, market power, innovation, and employment. This volume seeks to set the agenda for economic research on the impact of AI. It covers four broad themes: AI as a general purpose technology; the relationships between AI, growth, jobs, and inequality; regulatory

responses to changes brought on by AI; and the effects of AI on the way economic research is conducted. It explores the economic influence of machine learning, the branch of computational statistics that has driven much of the recent excitement around AI, as well as the economic impact of robotics and automation and the potential economic consequences of a still-hypothetical artificial general intelligence. The volume provides frameworks for understanding the economic impact of AI and identifies a number of open research questions.
